

Statistical Methods

Lecture 2 – Describing Data-Sets

Luke Dickens

Autumn 2020

Python: List Comprehensions

Frequency tables and graphs

Grouped data and histograms

Other representations

List comprehensions are a simple, compact way to construct, and convert between, lists. Let's see some on this week's notebook.

Python: List Comprehensions

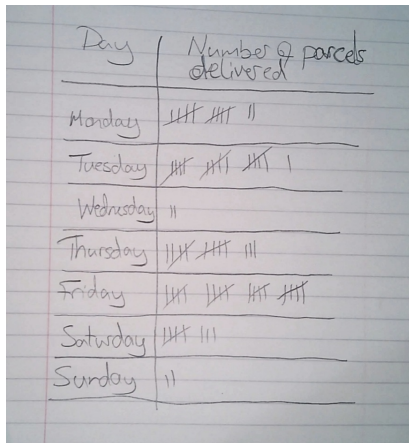

Frequency tables and graphs

Grouped data and histograms

Other representations

One of the most common form of statistical procedures is to count the frequency of occurrences.

- data can be numeric, but doesn't have to be
- can display as a collection of observations
- OR as a table of frequency counts
- OR as a plot
- OR ...

Day	Number of parcels delivered
Monday	
Tuesday	
Wednesday	
Thursday	
Friday	
Saturday	
Sunday	

All forms can represent the same data. We sometimes want to transform data into representations that better show the patterns.

- **variable** a characteristic that changes or varies over time and/or for different individuals/objects, e.g. body temperature
- **experimental unit** the individual or object on which a variable is measured.
- **measurement (or data value)** results when a variable is measured on an experimental unit
- **population** the set of all measurements of interest
- **sample** a subset of measurements selected from the population

Definitions as found in [MBB12]

Representations from [Ros17, Chp. 2] of the sick day data.

Table 2.1 A Frequency Table of Sick Leave Data

Value	Frequency	Value	Frequency
0	12	5	8
1	8	6	0
2	5	7	5
3	4	8	2
4	5	9	1

Frequency table

Frequency polygon

Line graph

Bar graph

Key features of a plot might include:

- Zero counts
- Symmetry
- Outliers
- Any other patterns

Image from [Ros17] showing types of symmetry.

Python: List Comprehensions

Frequency tables and graphs

Grouped data and histograms

Other representations

- Data grouped by class intervals or bins
- Fewer bins: clearer patterns but hides information
- More bins: retains information but patterns may be lost
- Bins typically same size
- End points must belong to just one group, e.g. use **left-end inclusion convention**
- Relative frequencies also possible

(a)

(b)

(c)

Plots from [Ros17]

Python: List Comprehensions

Frequency tables and graphs

Grouped data and histograms

Other representations

- Simplified view by grouping
- More information than histograms
- Order leaf entries for clarity
- Dual plots for comparison

Girls		Boys
5	14	
7, 5, 5, 5, 4	15	3, 8, 9
8, 4, 2, 1, 0	16	2, 5, 7, 7, 7, 8, 8, 9
9, 8, 7, 6, 6, 4, 2, 1, 1, 0, 0	17	0, 2, 3, 6, 6, 7, 7
	18	0, 1, 4, 5

Stem and leaf plot of children's heights by gender sourced from [here](#).

Plot of body temperature vs heart-rate by gender.

Data from [Sho96]

- When values are paired, two measurements for single observational unit
- Look for relationships between measurements
- Can identify outliers more readily
